

PEMCO DOT-4, brake fluid

DOT-4 is specifically designed to resist the high temperatures of brakes and clutch systems. The elevated boiling point of Brake Fluid DOT-4 enables effective braking even under the extreme conditions of competition. The very high wet boiling point, is superior to conventional brake fluids and provides a particularly efficient braking system in rain/high humidity environments. It can be mixed with any other well known brake fluids of same specification. PEMCO DOT 4 is chemically stable and contains additives guaranteeing best lubricating properties.

Meets the following requirements and specifications:
SAE J 1703; ISO 4925; FMVSS 116 DOT 4
